

Convocation 2020

University of Moratuwa

24th & 25th August 2020 at BMICH, Colombo

MESSAGE FROM THE CHANCELLOR

I heartily congratulate the Graduating students!

It is not just a degree; it is a prestigious degree from the UNIVERSITY OF MORATUWA, well known for excellence. I admire the dedication of the academic and other staff.

The graduating students, as well as their predecessors and those who are still studying are acknowledged for the high credit that they bring to the University.

It is a personally satisfying day for me today as the founding Dean in 1972 of the then single (and only) Faculty of Engineering & Architecture. I have witnessed the progress of the University of Moratuwa from its very inception. When I look at the University of Moratuwa today, I am overwhelmed with pleasure because the University of Moratuwa has achieved much more than the expectations we had in the initial years. In spite of the CORONA epidemic, this year we have more than 1400 graduating students, with more than 380 at postgraduate level including 11 Ph.D.s; there were no postgraduates in the initial years. Congratulations go to Prof. Kapila Perera, the former Vice-Chancellor and Acting Vice-Chancellor Prof. P.K.S. Mahanama

Most of our graduates remain in Sri Lanka and are contributing to nation building as Architects, Engineers, Planners, Designers, Information Technologists, Quantity Surveyors, Transport and Logistics Managers etc. Some study further and join the Teaching or Research staff in establishments all over the world. They contribute from wherever they are. Still others become policy makers, and leaders heading government and private sector establishments. A very few have achieved Ministerial portfolios and are in macro nation building through carefully analyzed and prepared policies, programs and projects. The past achievers become role models for many current students.

My best wishes to the new graduates who are undoubtedly real achievers!

Vidya Jyothi Prof. K. K. Y. W. Perera

MESSAGE FROM THE ACTING VICE – CHANCELLOR

The General Convocation is the most significant event in the annual agenda of the University of Moratuwa which empowers its graduands with their knowledge and skills to serve the society to reach the higher level of socio-economic development of Sri Lanka. I am delighted to note that this year University of Moratuwa has produced 11 PhDs, 13 MPhils, 362 postgraduates and 1491 graduates for the society.

It is a well-known fact that the University of Moratuwa attracts a major fraction of best students of the Advanced Level examination from all over the country. The university utilizes its limited resources efficiently and effectively to transform the talents and capabilities of these brilliant youth of the country making them creative & innovative professional practitioners, entrepreneurs and leaders of tomorrow. This creates many opportunities for our graduates to become competitive players on a global platform empowering them the use of their critical thinking, knowledge & skills acquired through dedication and hard work during the undergraduate era.

In line with our strategic goals, the university has taken all its efforts to produce highly qualified graduates with relevant knowledge and skills to meet the challenges of the world of work. During this journey, all the academic

departments have paid focused attention to maintain highest quality through the practice of Quality Assurance and Accreditation principles within the purview of the University Grants Commission's framework. These efforts also incorporate international Accreditation of its study programs envisaging them to fall in line with international benchmarks of the degrees in professional routes.

I congratulate all graduands for their achievement and wish them all the very best in their future endeavours and chosen career path.

Prof. P.K.S. Mahanama

MESSAGE FROM THE REGISTRAR

It is my pleasure to forward this message for the supplement on the occasion of General Convocation, University of Moratuwa in my capacity as the Registrar.

My heartfelt congratulations and best wishes to all Graduands on this important day. The University of Moratuwa is proud that you have reached this important milestone and I hope that you will not forget those who have helped you get here. Your family, your friends, your teachers, our staff and the community who have supported you and proud of your accomplishment. My appreciation goes to them as well.

Student success is at the core of University of Moratuwa's mission. The skills and experience gained during your time at the University of Moratuwa will serve you well far into the future. Employers value the knowledge with technical education because the hands-on nature of our programs equip you with the skills to approach challenges with a critical eye and solutions-focused mindset.

While this part of your education journey may be complete, it is my hope that as a proud graduate you continue to have strong ties with the University of Moratuwa for many years to come.

Congratulations once again on behalf of academic, non-academic and administrative sectors of the University of Moratuwa.

Mrs. W.M.D.P. Madawala Hulugalla

MESSAGE FROM THE DEAN, FACULTY OF GRADUATE STUDIES

The Faculty of Graduate Studies (FGS) continues to enhance the University's three research degree programs, Master of Science (with a major component of research), Master of Philosophy (MPhil.) and Doctor of Philosophy (PhD.). Together with the Offices of Research and International Relations, we seek to enhance these programs through strategies to attract capable students and to explore new research partnerships and funding opportunities. Research, being the cornerstone of an academic career, is a key factor in motivating and retaining the high-calibre academics that the University is home to.

Our joint PhD program now extends to 3 partner universities with 6 candidates currently participating. This program enables students to be guided by a team of experts from UoM as well as the partner universities, and to obtain a single PhD from both. Our intentions are to provide opportunities for international research collaboration to our academic staff, and an exposure to different cultures to our graduate students. We currently have 5 fully industry-supported PhD candidates as well.

The FGS supports eight Multidisciplinary Research Centers which facilitate synergistic collaboration among different faculties and departments, with other local and foreign universities and industry. The centers cut across and bring together the entire domain of expertise within the University in different combinations.

Despite recent restrictions, with immense support from the Panels of Examiners, the University's IT systems and the concessionary facilities extended by the telecommunications service providers, all students who were planning to graduate this year have been able to do so. Over 30 online evaluations including six PhD vivas were conducted, involving examination panels comprising of local and foreign academics.

The 2020 Convocation awards 11 PhDs, the highest number awarded in any year so far. A total of 66 research degrees are awarded. I congratulate the graduands, and wish them all success in their future endeavours.

Prof. (Mrs.) Dileeka Dias

MESSAGE FROM THE DEAN, FACULTY OF BUSINESS

Convocation is, above all, a time to celebrate the achievements of our graduates who have earned their degree through years of hard work and dedication. Graduation marks an important day in their lives – yet, it is a beginning of a journey. As the new graduates take the first steps towards their profession, an entrepreneurial pursuit or perhaps to further study tomorrow, I encourage them to see this success as both a source of pride in their past achievements and as a basis for confidence in their future.

The University takes a great pride in attracting the brightest of the bright from all corners of the country and putting them through rigorous education, training, and skills development in architecture, business, engineering sciences, and information technology in an environment where they could mature to their fullest ability. This is one of the main reasons as to why our graduates are in high demand among employers in the state and private sectors. In fact, most of our study programmes have recorded very high employability within three months after graduation.

The University has been able to set and maintain very high standards of teaching and learning, which in turn, has provided a solid foundation for our graduates to exceed the expectations of the industry and achieve excellence. The new graduates should however remember that this is not the end of their learning. They still have a whole lot to learn

and they should continually improve their skill base through life-long learning. Our doors remain open to them to further their studies. If not a higher degree in the same field, they could consider obtaining a postgraduate qualification in another field at the University of Moratuwa in order to enhance their ability, not just to seek better employment but to create employment for others.

On behalf of the Faculty of Business, I congratulate all those who graduate today and I am sure that they will turn out to be excellent, brilliant and confident leaders of tomorrow. This is exactly what our University expects them to be: simply the best.

Prof. N.D. Gunawardena

MESSAGE FROM THE DEAN, FACULTY OF ENGINEERING

It is a privilege and a pleasure for me to be able to congratulate all one thousand eight hundred and seventy seven (1877) graduates who are fulfilling today one of the most precious dreams in their life – a degree from the University of Moratuwa. Among those I am glad to see 1112 graduating from the Faculty of Engineering alone. This year the Engineering Faculty confer 7 Doctor of Philosophy degrees, 12 Master of Philosophy degrees, 169 Masters degrees and 21 Master of Business Administration degrees and 903 Bachelor of Science in Engineering degrees.

You have laboured long and hard to make this day a reality and today you reach the pinnacle of your vision. Deservedly it's time to celebrate and revel in your achievement. Now is also the time to sit back and ponder for a while on the life thus far and its future. Reflect a moment upon your family and the loved ones who have made enormous sacrifices, in kind, in time and money, towards your education. Remember your country has made immense contributions to create this wonderful seat of learning for you to reach the higher echelons of society. Now that you have grabbed the knowledge you have been seeking, ensure your intellectual potential is productive to the

country and meaningful to yourself. Make the University and the Faculty of Engineering proud by becoming creators of new wealth for the development of the country. Having seen first hand your successful journey thus far from inside, I have no doubt you are capable of delivering on these goals once outside the University.

In your quest for happiness of life and material wealth, do not forget Vidyaiwa Sarwadhanam – Wisdom is all Wealth. You may already have within yourself what you are seeking from outside. I wish you the very best in all your future endeavours.

Prof. N.K. Wickramarachchi

MESSAGE FROM THE DEAN, FACULTY OF ARCHITECTURE

It is my privilege as the Dean of the Faculty of Architecture to send this message to the General Convocation of University of Moratuwa 2020.

Today is a memorable day in the academic life of the graduands, as you have reached your destination through sheer perseverance and dedication during a period of four or five years at the Faculty of Architecture, University of Moratuwa. It will also be a very significant event for your parents and family members who have immensely contributed for the progress of your academic life with patience, understanding, sacrifices and support, both material and moral.

Faculty of Architecture of University of Moratuwa is the only faculty in the state sector University system of Sri Lanka, which conducts undergraduate, postgraduate and doctoral study programs in the disciplines of Architecture, Landscape Architecture, Design, Quantity Surveying, Facilities Management and Town & Country Planning. At this convocation 389 graduands will receive their degrees. We believe that our graduands had the opportunity to enjoy the wholesome student life within the university and they have achieved the required knowledge and skills to practice professions in their respective fields on par with the best international standards, while setting new bench marks. More importantly we expect that, the values and attitudes developed during the studentship at University of Moratuwa will make them responsible citizens of the country.

I am very proud to witness the passing out of 332 undergraduates and 57 postgraduates recipient at this convocation with our Chancellor, Vice Chancellor and the academic staff of the Faculty of Architecture.

Dear graduands, if you look back you would realize that you are the ultimate product of a long and tedious process of education. I wish to emphasize that it is your duty and obligation to contribute back to the society in nation building.

I would like to congratulate the graduands and their parents, while thanking all academic and administrative staff for their contribution made to produce these graduates with degrees accredited locally and globally. I take this opportunity to wish you all the best in your future endeavours.

Dr. D.P. Chandrasekara

MESSAGE FROM THE DEAN, FACULTY OF INFORMATION TECHNOLOGY

Our warmest thoughts and highest hopes are with you as you celebrate your graduation.

The convocation ceremony of the University of Moratuwa of year two thousand and twenty marks the graduation of two batches of undergraduate students, as well as Master's students from the Faculty of Information Technology. As the Dean of the Faculty of Information Technology, executing a pleasant duty, this message is sent extending the best wishes of the faculty to the graduating students and their family members, celebrating the fulfillment of their lifelong dreams.

The selection of candidates for the two undergraduate Honors degree programs in BSc in IT and BSc in IT&M is made based on an open entry criteria, incorporating all four GCE advanced level study streams. This unique scheme of selecting candidates, has paved the way to enroll a non-homogeneous group of students with multiple capabilities, leading to the creation of a synergistic environment for the rapid development of undergraduates for a multi-faceted career.

The undergraduates degree programs at the Faculty of Information Technology are broad-based, covering a wide spectrum of knowledge areas including software engineering, computer science and Information systems. The Undergraduates at the Faculty are not involved in studying IT as a derisory raw technology, devoid of all important human aspects, but are engaged in gathering more completed and pragmatic knowledge by studying society and technology together. The implementation of the two undergraduates degree programmes is carried out through the coordinated efforts of the three department of the faculty, the Department of Information Technology, Departments of Computational Mathematics and Department of Interdisciplinary Studies.

Mr. B.H. Sudantha

OUR ACHIEVEMENTS AT A GLANCE

- A range of IoT products developed at the Dialog-University of Moratuwa mobile communications lab won the coveted 'award at the 7th annual Global Telecoms Awards (GLOTEL Awards) held in London in November 2019. The winning entry is a result of a 4-way partnership between Dialog, the University of Moratuwa, Axiata Digital Labs (ADL) and Lanka Electricity Company (LECO). As the award signifies, the partnership has demonstrated that home-grown technology can make a global impact. The end-to-end IoT systems experience gained throughout this development process has also enabled the Department of Electronic & Telecommunication Engineering to introduce two new course modules for its undergraduates, as well as the Dialog-UoM lab to support several final year projects.

- A group of students of Batch '15 of the Department of Computer Science and Engineering have participated in Microsoft Imagine Cup 2019 and got selected for the regional finals. They are the only team from Sri Lanka who was able to qualify for the regional finals and was one of the 12 teams which were selected for finals. The final round was held on 10th February, 2019 in Sydney. The competing product is named Mind Probe, which aims at helping people with communication disabilities like ALS, and DMS. The brain waves are used to predict a number a person is thinking and this information will be used to interface with a smartphone.

- A group of undergraduates of the Department of Integrated Design (DID), Faculty of Architecture won the pavilion design competition of Creative Youth Program (CYP), Expo2020 Dubai. Upon winning the competition, the team got the opportunity to be involved in the execution phase of Sri Lanka Pavilion for Expo-2020 in Dubai until year 2020. This brought plenty of benefits to the country, including free of duty in fit-cost-construction of Sri Lankan Pavilion inclusive of all freight. The Press Briefing and Certificate Awarding Ceremony for the winning team was held at the auditorium, Sri

Lanka Export Development Board (EDB) on 26th February 2019 under the patronage of Mrs. Indira Malwatte, Chairperson and Chief Executive of EDB. Hon. Minister Malik Samarawickrema, Ministry of Development Strategies and International Trade and Prof. Kapila Perera, the Vice Chancellor, University of Moratuwa graced this ceremony as the chief guests.

- A third year student in Media and Communication Design of the Department of Integrated Design, Faculty of Architecture has been selected as the student representative of Sri Lanka for the Roger Hatchuel Academy of the Cannes Lions festival for creativity 2019. The Roger Hatchuel Academy is an annual five-day training programme, scheduled in France from the 17th - 21st of June 2019. The programme is designed to give students specializing in the field of advertising, communications and other creative disciplines a head start they need to secure a role within the competitive creative industry. It is tailored to the current industry landscape, one which combines classroom sessions and a selection of official Festival content. This opportunity is given only to 40 students across the world and by winning the Cannes Young Lions competition, he gets the opportunity to attend the Cannes Lions Festival 2019.

- A research team of students and staff from Department of Building Economics won the Best Track Paper Award at the 9th International Conference on Industrial Engineering and Operations Management (IEOM) Conference held in Bangkok, Thailand for their research paper titled "Conflict Avoidance in Construction Stage through Proper Practice in Pre Contract Stage".

- A MPhil student of the Department of Electronic and Telecommunication Engineering, has won three gold medals, one silver medal, and three special prizes at the International Invention Innovation Competition (iCAN 2019) in Canada. His inventions included a guiding device for blind

people, a headlight dimming device for vehicles, an automated rail gate control system and a sewing machine monitoring system.

- The 19th Kuala Lumpur International Business, Economics and Law Conference 2019 organized by the Infrastructure University Kuala Lumpur, Selangor, Malaysia was held on August 24-25 at Bangi, Selangor, Malaysia. The Best Paper Award was presented to Dr. Thesara VP Jayawardane at the Department of Industrial Management, Faculty of Business for her paper titled "Sri Lankan Female Entrepreneurs: The Legal Challenges Faced". Her research paper will be published in the International Journal of Business, Economics and Law, Volume 19.

- Spikes Asia, Singapore provides a platform for the Asia Pacific's creative community to come together for a spectacular three-day celebration of creativity in communication. Spikes Asia Festival is considered a once in-a-lifetime opportunity for learning and networking for creative communications professionals across the region. In the Young Spikes Student competition organized under this, students were asked to create a poster in response to a brief provided by UNDP. A Level II student of Media and Communication Design, Department of Integrated Design, Faculty of Architecture, University of Moratuwa won the Gold Medal for the Student Creative Award for Print for his poster design. He also got the opportunity to go to Singapore for a conference, a workshop and an awards ceremony from 25th to 27th September 2019 at the Suntec Convention Center, Singapore.

- A group of students from Electronic and Telecommunication Department were able to present a design idea for a device that helps people with speech disorders to communicate with others. The idea was unveiled at the InnovateFPGA 2019, which is a global FPGA design contest where teams

- from around the world compete to invent the future of Artificial Intelligence with Terasic and Intel. From the 30 teams which participated, they were able to secure the Iron Award at the Asia Pacific and Japan regional final round of the InnovateFPGA competition.

- Dr. Thilina Lalitharathne, Sanjaya Mallikarachchi and Dulith Chinthaka of Department of Mechanical Engineering won the First Prize at the BrainComputer Interface Hackathon held during the IEEE BIBE 2019, Athens, Greece for their “Brain Signaled Controlled Wearable Surgery Assistant Robot”.

- The Annual MAS Awards Ceremony 2018 was held on 28th of February 2019 at Galle Face Hotel, Colombo with the participation of top ranking personals at MAS cluster and other Universities. Head of the Department of Textile and Clothing Technology, Prof.(Mrs) Samudrika Wijayapala and other senior staff members have been invited as special guests to grace this occasion. Two students of Department of Textile and Clothing Technology received the MAS Award for the Best Overall Student for the year 2018 and Best Overall Student for the year 2018 - Fashion Design and Product Development.

- “KDU Logistics Day 2019” a Logistics Case Study challenge, organized by the Management Club of General Sir John Kotelawela Defense University in collaboration with Hayleys Advantis concluded successfully at Hayleys Advantis premises on the 1st of April 2019. TLM undergraduates emerged as the champions as well as first runner up and second runner up.

- A Level 4 student in the Faculty of Information Technology won STEMUp Most Valuable Volunteer (MMV) Award for the year 2019-2020 on 24th August 2019 at SLT

Head Office, Colombo. STEMUp Educational Foundation recognizes individuals who have contributed their valuable time and skills for the benefit of student community and inspired others to volunteer.

- The Faculty of Engineering, University of Moratuwa won the Gold Award for the Best University Stall at Techno 2019, the National Engineering and Technology Exhibition, organized by the Institute of Engineers, Sri Lanka. This was held on 11th, 12th and 13th of October at BMICH. University of Moratuwa attained the Gold Award for four consecutive years consecutively competing with other state universities. The exhibition was organized to provide an innovative and exciting experience under the theme “Innovative Engineering towards Sustainable Sri Lanka”. Modern and thrilling exhibits from undergraduate and postgraduate research projects of all departments of the Faculty of Engineering were showcased at the exhibition.

- At hackX 2019, an Inter University Hackathon organized by the Industrial Management Science Students’ Association of the University of Kelaniya, undergraduates were given a chance to design innovative and feasible solutions and execution plans to solve existing issues both locally and globally. The team Bits of Erised from the Faculty of Information Technology, University of Moratuwa was awarded 2nd Runners up of hackX 2019 on 29th September 2019, after successfully getting through the initial filtration round, semi finals and finals of the competition.

- Team Legato representing the Classical Music Society of University of Moratuwa was able to win the Best Performance Award along with the Most Popular Award at the Andante 2019 Inter University music competition. This competition was organized by Sri Lanka Technology Campus and the grand finale was held at Nawarangahala, Royal College, Colombo.

- Ms. Fasma Fasly, Research Assistant of the Department of Building Economics and Dr. (Ms.) Sachie Gunathilake, Senior Lecturer

of the same Department, won the BEPAM Highly Commended Paper Award for the paper titled “Energy Retrofits to Enhance Energy Performance of Existing Buildings: A Review” at the 8th World Construction Symposium 2019.

- A final year student of Department of Textile and Clothing Technology represented the National Taekwondo Team and was able to obtain a silver medal from women’s team (team demonstration) event (above 24 age category) at 13th South Asian Games held in Nepal from 1st to 10th December 2019.

- A first-year student of Department of Textile and Clothing Technology represented the National Karate Team and was able to obtain a bronze medal from Kumite (fighting) event at 13th South Asian Games held in Nepal from 1st to 10th December 2019.

- The sportsmen/women participated in the Sri Lanka University Games 2019 held at University of Ruhuna and placed second in Men’s Championship while Third in overall Championship among 14 Government Universities. University of Moratuwa won the SLUG Rowing (Men), Taekwondo (Men & Women) and Table Tennis (Men & Women) Championships. We were runner up in Badminton (Men), Basketball (Men), Chess (Men & Women), Football and Rowing (Women) while won the bronze medal in Basketball (Women), Carrom (Men & Women), Karate (Men) and Rugby Football.

VISION STATEMENT

To be the most globally recognized Knowledge Enterprise in South Asia.

MISSION STATEMENT

To be the leading Knowledge Enterprise for technological and related disciplines in South Asia by:

- ✓ Providing transformative education in technological and related disciplines which nurtures the inquiring mind and develops knowledge and skills for facing global challenges;
- ✓ Carrying out nationally relevant and high-impact research to expand the boundaries of knowledge and to enhance the national technological capabilities;
- ✓ Providing expert services to the State, Industry and the Society as an Internationally positioned Sri Lankan University; and
- ✓ Contributing to sustainable, scientific, technological, social and economic development of Sri Lanka.

Anuja Fernando

From Airport to Aerotropolis

Supervisor: Prof. Saman Bandara

In 2019, ten million passengers passed through the Bandaranaike International Airport (BIA). Travelers favour airports that offer outstanding experiences. Such a travel hub can bring an influx of foreign exchange through attractive product and service offerings. Anuja's quest was on transforming smaller airports such as the BIA to Aerotropolises.

Aerotropolises are areas around airports that have moved beyond core services such as landing, takeoff, passenger and baggage handling, towards venues for shopping, conferencing, sports, entertainment, relaxation etc. Anuja identified key enablers for transformation. She then developed Airport City Effective Criteria (ACEC) to assess the readiness of an airport for moving towards an Aerotropolis.

Gayani Jayatunga

Drying of black pepper

Supervisor: Prof. Padma Amarasinghe

Sri Lanka is a major producer of Pepper, exporting around 10,000 MT annually. With its pungent aroma and medicinal properties, pepper adds value to the food, pharmaceutical and cosmetic industries.

Gayani undertook to study drying, an important part of postharvest pepper processing. Her objective was to identify the best operational parameters for spouted bed drying, such as air velocity, drying temperature and bed height. Experimental data was fitted to several drying models to identify the best. Four models were developed and were extended to estimate drying time. Accordingly, she has been able to provide valuable recommendations for the pepper processing industry.

Hasitha Bandara

Better curing of concrete

Supervisor: Prof. Wasantha Mampearachchi

Curing of concrete requires adequate moisture to be maintained on the concrete surface to develop its strength. This process increases construction time, and may cause early age cracks. Hasitha set out to understand an alternative curing process which maintains water in porous aggregates within the concrete.

He chemically analyzed several local and imported clay samples, and established an aggregate production process to produce fine aggregates in the lab. The pore structures and curing properties of these were analyzed in detail. He then produced conventional and superior aggregates for internal curing in large quantities and validated the analysis with three types of concrete.

Faculty of Graduate Studies

University of Moratuwa Directory of Research

University of Moratuwa Awards 11 PhDs 41st General Convocation-2020 24-25 August

Kokila Abeykoon

Disabilities to residual abilities

Supervisors: Dr. Himan Punchedewa, Dr. Julian Nanayakkara

Kokila's research helps potential employers to evaluate People with Physical Disabilities (PPDs) for employment. She explored typical manual work activities (WAs) that could be performed by PPDs with their residual range of movement (RM) of the relevant body regions. She then mapped them to form a framework. Her work was guided by industrial engineers and medical experts. She tested the framework for usability and functionality with potential employers and PPDs respectively.

The framework identifies WAs for a PPD in line with his/her residual capability, and prompts to determine equipment, facilities, procedures and training needs for effective performance.

Upuli Perera

Efficient and clean energy from local firewood

Supervisor: Prof. Mahinsasa Narayana

Fuel wood accounts for the largest share of industrial energy usage in Sri Lanka, being the dominant fuel in tea, brick and tile industries. Biomass, despite being renewable and environmentally friendly, does not guarantee efficient or clean combustion.

Upuli undertook to characterize Rubber and Gliricidia in order to obtain a thorough understanding of the combustion process, aiming for better efficiency and less pollution. Due to the large number of variables involved, she resorted to numerical modelling and followed up with experimental model validation. Upuli's contributions are useful in designing and optimizing furnaces, where these local fuel wood varieties are used.

Mihirini Wagaarachchi

Experimenting with human-like artificial intelligence

Supervisor: Prof. Asoka Karunananda

Humans, with our sophisticated Neocortex, have a six layer neural network to perform brain functions. Artificial Neural Networks (ANNs) try to replicate the problem solving abilities of the human brain. However, many real life ANNs have only a few hidden layers, trading off performance with complexity. Mihirini's investigation was about the optimum number of hidden layers to solve a particular problem.

Mimicking neuroplasticity of the human brain, i.e., its ability to reorganize its neural connections, Mihirini developed a novel algorithm which she applied to ANNs with upto twelve hidden layers. She observed that a simpler architecture can be derived for a given complex ANN.

Sudarshana Perera

Filling a gap in the rubber industry

Supervisors: Dr. Shantha Egodage, Prof. Shantha Walpalage

The estimated annual gross turnover of the Sri Lankan rubber industry is approximately US\$ 1B. Our world acclaimed natural rubber (NR) products include tires and surgical gloves.

Fillers modify the mechanical properties of NR as required for a specific application. Though carbon black is widely used as a reinforcing filler, its colour and environmental pollution are limitations. Hence, Sudarshana investigated inexpensive and environmentally friendly alternatives.

He identified clay (Montmorillonite) as a suitable reinforcing filler, and carried out experimental investigations on preparation of the NR clay nanocomposite and resulting mechanical properties. These revealed that it is an excellent reinforcing filler at low loadings.

Chinthanie Weerakoon

A paradigm shift in computing with the Buddhist Theory of Mind (BTM)

Supervisors: Prof. Asoka Karunananda, Prof. N. J. G. Dias

In the human mind, repetition improves speed and quality of problem solving. According to the BTM, the key to this is the continuously evolving memory. In contrast, in the Von Neumann Architecture (VNA), memory is separate from processing. Chinthanie believes that this prevents effective utilization of advancements in processors and software.

Following the BTM, Chinthanie introduced the Six State Continuous Processing Model (SSPM) having external inputs and causal relationships involving previous inputs. Memory grows and organizes itself through this continuous process. SSPM can be applied to enhance the speed and quality of processing in areas such as control systems in aviation.

A publication of the Faculty of Graduate Studies

Budditha Hettige

English to Sinhala translation with Multi Agent Technology

Supervisors: Prof. Asoka Karunananda, Prof. George Rzevski

Natural languages are complex, and differ from language to language. This makes automated language translation challenging. There is always a quality gap between human translation and machine translation (MT).

Budditha presents a novel approach to MT that models the human language translation process. His MT system processes morphology, syntax and semantics interactively, like humans, rather than sequentially, as in current MT systems. He applies Multi Agent Technology to translate English to Sinhala in this way, which he named EnSiMAS. A statistical approach was taken to test the accuracy of translation. The adequacy and fluency of the best solution were evaluated with human support.

Rukmal Weerasinghe

Assessment of the National Innovation System

Supervisor: Prof. Ananda Jayawardane

Innovation is not always accidental. Systematic, formal mechanisms are needed to energize and diffuse innovation for economic development. Rukmal identifies key actors of a National Innovation System (NIS) as universities, industry and the government. He evaluates the effectiveness of roles played by the actors and their networking relationships through document reviews, surveys, interviews, independent reviews and social network tools.

Data analysis reveal that while the actors' traditional roles are evolving, their effectiveness is yet to reach a desirable level. Interrelationships appear fragmented. Rukmal suggests a simple model with four pillars linked with one connection, to build up a strong NIS for Sri Lanka.

Thanuja Silva

A new model for weekly rainfall

Supervisor: Prof. Sarath Peiris

South Asian countries fall victim to extreme weather events often. High population density, poverty and lack of resources for recovery aggravate the situation. Research shows that over the last 30 40 years, prediction of short term rainfall has been difficult due to erratic variability and high volatility.

Thanuja studied the variability of weekly rainfall including extreme events, focusing on the south west monsoon and the second inter monsoonal periods in Sri Lanka. She developed and validated a model to forecast weekly rainfall in Colombo. Her research outcome is a novel long range dependency model, whose performance is maintained over a wide range of forecasting lengths.
